Android HMI / Robotics Software Engineer | Application-Layer Device Systems

SUMMARY

Application-layer Android engineer targeting HMI, robotics, and industrial automation roles where operator-facing software connects people to physical systems. Background includes Android architecture, device communication, local networking, automation, observability, and enterprise reliability without claiming firmware or driver-level specialization.

TECHNICAL SKILLS

Languages: Kotlin, Java, JavaScript, Swift, Python, C#, C++, C, SQL
Android/HMI: Android SDK, Jetpack Compose, Coroutines, MVVM, LiveData, Retrofit, Gradle, React Native
Device Systems: Hardware SDK/API Integration, Local Networking, NanoHttpd, Device Monitoring, Splunk, Jenkins, Azure DevOps, Firebase

EXPERIENCE

Staples · Software Engineer II, Mobile Framingham, MA	Oct. 2022 - Present
- Modernized an operator-facing Android application from Java/Android 7 to Kotlin/Android 13, improving architecture and maintainability for hardware-integrated self-serve device workflows. - Integrated Android application flows with real-world device ecosystems including Xerox printers, PIN pads, scanners, payment terminals, and store network infrastructure across 500 - 1,000 retail locations. - Helped deliver a fault-tolerant, four-step local PIN pad upgrade process after vendor package constraints required a staged device update path; rollout completed with zero production failures across 800+ locations. - Built real-time device observability for printer status lights using Splunk dashboards that exposed issue duration and frequency for faster hardware diagnosis and operational visibility. - Owned implementation, debugging, deployment support, and long-term maintainability for production Android systems used in physical retail environments.	
General Motors · Sr. Mobile Device Software Developer Remote	Jul. 2021 - Jul. 2022
- Built a web dashboard to track Android and iOS app sizes, integrated Jenkins build pipeline data, and deployed build/release pipelines in Azure DevOps for mobile platform visibility. - Created a Universal Deep Link Handler in React Native to consolidate deep link management, improve user flow, and simplify future mobile development.	
Syntax Tutoring · Founder and CEO Foxborough, MA	Aug. 2021 - Jan. 2024
Founded a programming tutoring company and designed practical web and Android curricula, interactive Android test applications, lectures, and hands-on lab assignments.	

PROJECTS

Barcode Scanner Kotlin, Jetpack Compose, MVVM, Coroutines, NanoHttpd, LiveData
Built the company's first Kotlin Android application with a self-hosted local server on a tablet and scanner for POS barcode automation; automated 65 test cases, improved POS automation by 55%, and won first place in the 2025 company Hackathon.
Yardscape Kotlin, Java, MVVM, Coroutines, Volley, Firebase
Engineered an Android marketplace application using Java, Kotlin, MVVM, Firebase authentication/storage, and API-backed listing workflows for browsing and posting yard sale listings.

EDUCATION

University of Massachusetts, Lowell · Bachelor of Science in Computer Science	Dean's List Recipient
